AUTISM RECOVERY Kickstart

PARASITE SYMPTOMS

Most people have parasites, especially children with autism.

Parasites mutate within 15 minutes to no longer be intact to be seen by the eye or in a microscope, so stool tests are invalid. If testing, use an antibody test. DNA is often the only way to see if they are there at all, even if there is a big infection. **Symptoms are a much better guide.**

Parasites symptoms:

- **#1 symptom: Chronic constipation**
- Itchy skin
- Anger and 'crazy-type' behaviors
- Lungworm in the brain causes brain fog and chronic fatigue. Parasites may be in the sinuses (Formula 1NSB is helpful too).
- Diarrhea is commonly a symptom of giardia.
- **Parasites particularly like the B vitamins,** sugar and (tyrosine). These things will be craved by the host. Avoid them.
- Hungry all the time. The parasites eat the nutrition from the food he eats so his body will be hungry because it's craving nutrition it's not getting. We're working on this now so don't worry.
- Personality type in Women-overly trusting and cooperative, even when the person or situation would be seen as dangerous to others.
- Men: **extreme** risk takers.

Common Parasite symptoms are: mouthing, chewing, drooling, teeth grinding, hair pulling, chronic constipation or diarrhea, itchy skin, chronic fatigue, wild behaviors, sinus issues, and craving sugar.

The mouthing by itself is often a symptom of low nutrition because the parasites are eating the nutrition from the food she's eating. Do not add B vitamins into the diet since parasites thrive on them.

Parasites hate garlic and onions so you can add some to the diet, as long as your child tolerates them, (since they contain sulfur, which is good but some kids are sulfur sensitive at this stage), and if they'll eat them.

Stay on top of these parasites. They lay eggs and are cyclic so it is to be worked with ongoing.

First, get binders and support supplements going.

Remember, most test results are inaccurate or unnecessary so I do not advocate them. They can be done, of course, as your own choice. Note that there are no reliable tests for parasites. They show up only 1-10% of the time in tests even if the infection is big.

Once binders and detoxification supplements are going then, in the Naturally Recovering Autism membership we use proprietary organic herbal formulas for parasites (and Lyme). Lyme lives inside of parasites so it is important to do the protocol for both at the same time. The herbals are broad spectrum so they will help support the body and the immune system at the same time.
